Libguides in Blackboard

A step-by-step guide to integration
libguides.fiu.edu/hacks/blackboard
Start by going to Online.fiu.edu on your browser.
Log in using your My Accounts Username and Password.
After logging in, select your course from the “My Courses” menu in the center.

I will be using the “Libguides Testing – Prod” course in this demonstration.
From the “Content” panel, under the “Tools” menu select “Libguides.”
On the “Create Libguides” screen, you will need to give the page a name. Other information is optional. Click on “Submit” in the upper right when done.
Note the page we just created is on the bottom of the list. Feel free to move it around.

Double-click to open the page.
After opening the page, you will be asked to set up the LTI tool. From the dropdown menu, select our Libguides Site.

HINT: There’s only one! FIU Libraries: research – libguides.fiu.edu
Next, we will need to select the content type. You can insert content from guides like:

- Full Guides
- Single Pages
- Content Boxes
Or you could insert content from our A-Z Databases, like:

All A-Z Databases  ||  Subject Databases + Specialist Info
Subject Databases  ||  Specific A-Z Databases
New/Trial Databases
I have elected to insert a libguide. My next step is to select the guide from the menu.

If you know the name of your guide, you can start typing. If not, you can also browse to find your guide.
The “Guide Page” menu determines which page on the guide opens when students launch the page. This is optional, but I will select “Getting Started” for this demonstration.
Once all this information is completed, you will be allowed to click on the button to "Embed Content."
Congrats! You have successfully embedded a libguide into your Blackboard course.
