LibGuides in Canvas

A step-by-step guide to integration

libguides.fiu.edu/hacks/canvas
Start by going to Online.fiu.edu on your browser and click on LOG IN.
Select the **CANVAS LOGIN** option.
Log in using your My Accounts Username and Password.
After logging in, select your course from the “Dashboard.”

I will be using the “ChrisJimenezSandbox1” course in this demonstration.
Select or create the module where the LibGuide will reside. I will add content to the “Tudors & Stuarts Library Content” Module by clicking on the + button.
Change the dropdown menu from “Assignment” to “External Tool.”
Next, we will select the LTI tool from the menu. It is called “LibApps Library Content.”
After initiating the tool, you will be asked to set up the site. From the dropdown menu, select our Libguides Site.

HINT: There’s only one! FIU Libraries: research – libguides.fiu.edu
Next, we will need to select the content type. You can insert content from guides like:

Full Guides || Single Pages || Content Boxes
Or you could insert content from our A-Z Databases, like:

All A-Z Databases  ||  Subject Databases + Specialist Info Subject Databases
Specific A-Z Databases  ||  New/Trial Databases
I have elected to insert a libguide. My next step is to select the guide from the menu.

If you know the name of your guide, you can start typing. If not, you can also browse to find your guide.
The “Guide Page” menu determines which page on the guide opens when students launch the page. This is optional, but I will select “Articles” for this demonstration.
Once all this information is completed, you will be allowed to click on the button to **Embed Content**.
You may now specify the name of the resource and its page behavior. When ready, click to Add Item.
Click to **Publish** the content.
As Faculty, when you click on the LTI Tool, you will be asked if you would like to view the content. Students will automatically see the content inside Canvas.
Congrats! You have successfully embedded a libguide into your Canvas course.
